PROFESSIONAL EXPERIENCE

Speakeasy

Forward Deployed Engineer

San Francisco, CA

July 2026 – Present

- Supported technical evaluations and onboarding across 12 enterprise customer projects, translating identity, observability, and AI-governance requirements into integration configurations, technical troubleshooting, and customer-driven product improvements.
- Expanded AI governance coverage to OpenCode and GitHub Copilot by implementing platform integrations for security enforcement and observability; unified acknowledgment-based policy enforcement across 4 AI coding clients.
- Advanced MCP integration enablement across 8 enterprise services, resolving authentication and protocol issues and delivering configuration guidance; extended the developer playground to support both remote and private-tunneled MCP servers.
- Turned enterprise deployment blockers into reusable onboarding improvements, including gateway-specific setup, admin-managed configuration presets, network prerequisites, and telemetry guidance to support repeatable customer deployments.

Wayfair

Software Engineer

Boston, MA

Jan 2025 – Mar 2026

- Built a retrieval context pipeline for internal LLM support agents using Redis-cached metadata, increasing RAG precision by 20% and reducing hallucination rates across 73K annual support tickets.
- Developed automated customer support workflows that achieved a 70% ticket deflection rate, contributing to over \$1M in projected annual operational savings.
- Implemented a RAG evaluation framework using RAGAS and GPT-4o-based evaluation workflows, resolving retrieval bottlenecks and improving internal approval rates by 15%.
- Designed a ServiceNow-integrated escalation system that routed support requests across 59 internal service forms using classification-based prioritization and keyword-driven workflows.
- Won 1st place in a company-wide innovation challenge for developing a multimodal prototype that converted CAD diagrams into interactive assembly instructions using GPT-4 Vision APIs.

TECHNICAL PROJECTS

Chorusboard

Founder

Boston, MA

Jan 2026

- Built a social music-ranking platform that generates global leaderboards from pairwise user preferences using a Bradley-Terry probabilistic ranking model implemented in Python.
- Improved ranking convergence speed by 40% through a custom comparison scheduling system using asynchronous Redis Queue (RQ) workers.
- Designed and deployed a React and PostgreSQL application supporting concurrent voting sessions and real-time leaderboard updates.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, SQL, C++

Backend & Infrastructure: AWS, Docker, Redis, SQS, FastAPI, Node.js, PostgreSQL, GitHub Actions

AI Systems: RAG, OpenAI APIs, Anthropic APIs, Pinecone, ChromaDB

Engineering Areas: Distributed Systems, Async Processing, API Integrations, Observability

EDUCATION

University of Wisconsin–Madison

Bachelor of Science in Computer Science and Data Science

Madison, WI

Sept. 2021 – May 2024
